Infrastructure Software Engineer | Production Systems, Containers, and AI Applications

Summary

Software engineer with 3+ years of experience building and operating production applications, containerized services, internal tooling, and data pipelines. Own infrastructure and reliability across 200+ public-facing services using Python, TypeScript, Linux, AWS, Docker, APIs, databases, CI/CD, incident response, and production troubleshooting. Built and deployed AI-powered systems with multimodal ingestion, structured LLM outputs, streaming, and context-aware knowledge workflows.

Technical Skills

Languages: Python, TypeScript, JavaScript, PHP, SQL **Infrastructure:** Linux, AWS (EC2, Route 53), Docker, Kubernetes fundamentals, SSH, DNS, TLS/SSL

Backend & Data: Node.js, Express, FastAPI, REST APIs, background jobs, WebSockets, SSE, PostgreSQL, MariaDB, MongoDB, Redis, SQLite

AI & Operations: Gemini API, OpenAI API, multimodal processing, structured outputs, GitHub, Bitbucket, CI/CD, monitoring, log analysis, incident response

Reliability: Root-cause analysis, retries, rate limiting, caching, validation, failure recovery, reverse-proxy routing

Experience

Senior Software Engineer

2023 to Present

Inversellogic, Los Angeles, CA

- Own production infrastructure and application operations for 200+ public-facing websites and services across Linux, AWS, containers, databases, APIs, DNS, and TLS.
- Build internal tools, automation workflows, and customer-facing applications using Python, PHP, JavaScript, SQL, REST APIs, and database-backed architectures.
- Deploy and support Docker services with working knowledge of Kubernetes workloads, deployments, services, configuration, and container troubleshooting.
- Build and maintain CI/CD workflows using GitHub and Bitbucket to validate, package, and deploy changes across production and non-production environments.
- Monitor application, container, web-server, and database logs; lead incident response and root-cause analysis across service, data, networking, and third-party integration layers.
- Partner directly with clients and internal stakeholders to translate operational requirements into reliable production implementations and durable corrective actions.

Founder & Lead Engineer

2024 to Present

RLA Studios, Los Angeles, CA

- Build and operate a multi-tenant AI platform that converts emails, PDFs, images, and documents into structured support tickets and executable task plans.
- Designed multimodal ingestion and a service-oriented backend with 50+ REST endpoints, workspace-level data isolation, background processing, and real-time SSE streaming.
- Built a versioned knowledge system with chunked search and automated context injection to improve AI-response accuracy and consistency.
- Implemented validation, retries, state tracking, error recovery, and operational logging; deploy the platform on self-managed Linux infrastructure using Docker and reverse-proxy routing.

Selected Projects

BetWatcher • betwatcher.io

2026

- Built a real-time TypeScript/Node.js platform that normalizes unstructured betting tickets and synchronizes changing state through polling, scheduled jobs, event-driven updates, and SSE.
- Added safeguards for delayed updates, duplicate records, inconsistent APIs, and cross-sport edge cases; deploy and operate the application with Docker.

Real Estate Data Automation Platform • rlstudios.com

- Built Python/FastAPI and Node.js ingestion, normalization, and enrichment pipelines supporting lead generation, CRM, invoicing, reporting, and commission tracking.
- Operated a CRM with 1,900+ leads and automated outreach, invoice generation, Dropbox/Airtable integrations, retries, rate limiting, caching, deduplication, and recovery workflows.

Education

App Academy, Full-Stack Software Engineering

San Francisco, CA

University of Nevada, Las Vegas, B.A. Psychology

Las Vegas, NV

College of Southern Nevada, A.A. Psychology

Las Vegas, NV
